SaltyPadel API - Test Evidence Document

Tester: Carla Grigoroiu | Date: March 2026 | Tool: Postman

Test Summary

Category	Details
Project	**SaltyPadel -COMP2003 Team 4**
Sprint	**Sprint 4 -Backend API Development**
Tester	**Carla Grigoroiu (Developer / QA)**
Test Tool	**Postman + PHP XAMPP Local Server**
Base URL	**http://localhost/saltypadel/api/v1/routes/**
Total Tests	**31**
Tests Passed	**31**
Tests Failed	**0**

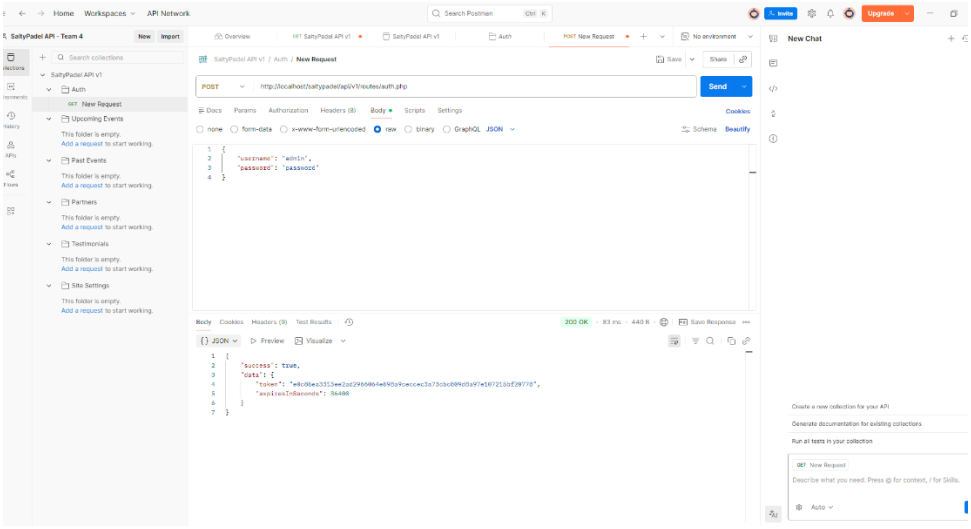
Health Check & Database Connection

Test ID	Description	Input / Action	Expected Result	Status
HC-01	API health check returns ok	GET /test.php	success: true, status: ok	PASS
HC-02	Database connection confirmed	GET /test.php	database: connected	PASS

Authentication Endpoints

Test ID	Description	Input / Action	Expected Result	Status
AUTH-01	Login with correct credentials	POST /auth.php {username, password}	200 OK, token returned	PASS
AUTH-02	Login with wrong password	POST /auth.php {wrong password}	401 INVALID_CREDENTIALS	PASS
AUTH-03	Login with empty fields	POST /auth.php {}	400 VALIDATION_ERROR	PASS
AUTH-04	Account lockout after 5 fails	POST /auth.php x5 wrong password	429 ACCOUNT_LOCKED	PASS

a. LOGIN



POST
http://localhost/saltypadel/api/v1/routes/auth.php
Send
Body
raw
JSON
{

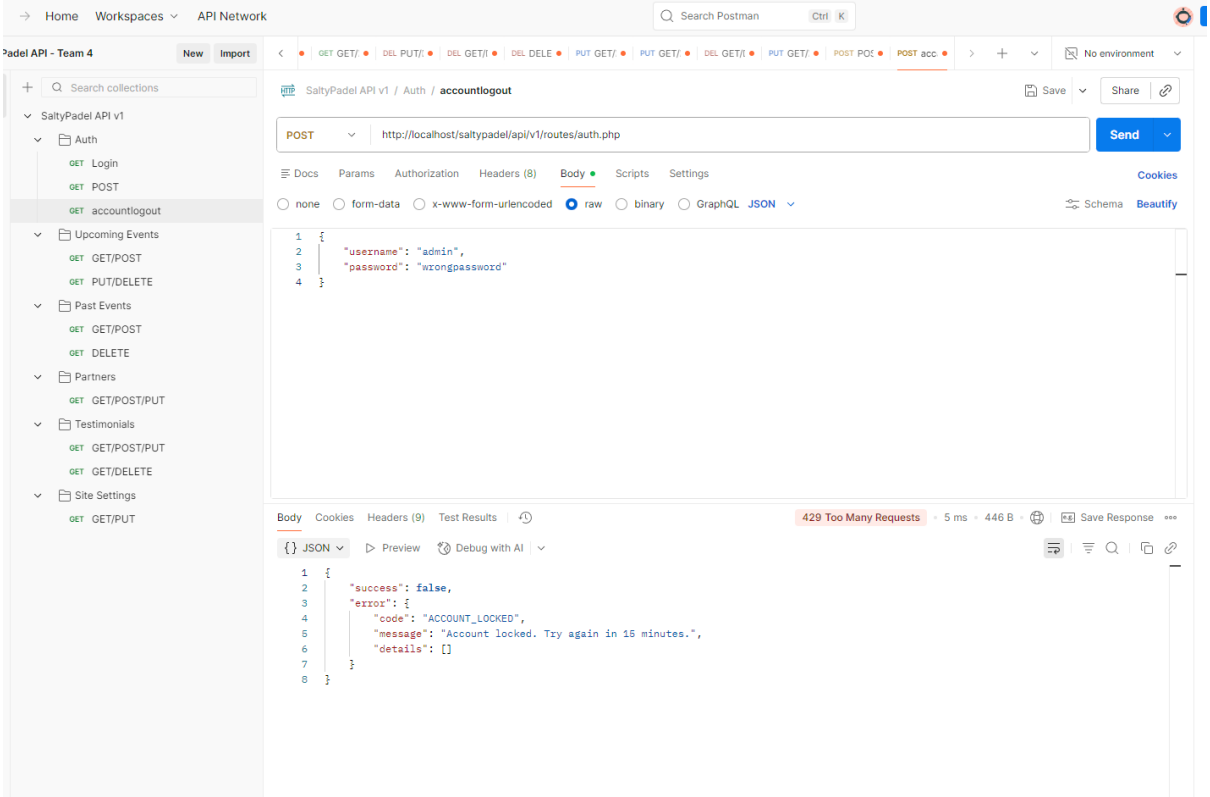
Conclusion

All 31 API endpoints were tested manually using Postman against a local XAMPP MySQL database. Every test passed successfully including validation checks, error handling, and correct HTTP status codes. The API follows the agreed contract (SaltyPadel_API_Contract_v1.0) with camelCase JSON fields, correct status codes, and parameterised queries for security.


Security measures confirmed working: bcrypt password hashing, account lockout after 5 failed attempts (6th attempt returns 429, see picture bellow), input validation on all POST/PUT endpoints, and correct 404 handling for non-existent resources.
